

Penn Yan stock bottles and jars

Looking for the perfect package for your product? Silgan Plastics is a leader in blow molding rigid plastic containers for beauty, personal care, OTC healthcare, pharmaceutical, food, household and industrial markets. We have a large selection of PET items that are stocked and available for immediate shipment in order quantities as low as one case. Our stock line of PET bottles and jars is continually growing to meet our ever-changing customer demands. Silgan Plastics' large selection of high-quality jars and bottles can help your brand take shape.

Lead times for these exclusive products change weekly, depending upon the volume of incoming orders. Please check with your Customer Service Administrator to verify current lead times.

What persuades consumers to gravitate to a specific product in a store aisle? What is it about packaging that piques interest? Unusual structural design? Bold graphics? A distinctive brand identity? Chances are color attracts people first.

Silgan Plastics' Penn Yan facility offers five stock colors for our mold available selection of PET bottles and jars. This option provides a lower cost solution and speed to market. These five stock colors - black, amber, cobalt blue, dark green and white, can be ordered in quantities as low as 10,000 pieces. Pricing is dependent on the bottle and quantity ordered. Please check with your Customer Service Administrator for current pricing and lead times.

Another great way to differentiate your product on the shelves is through decoration. Our Penn Yan facility has a large in-house decorating department with silk screen, shrink sleeve and PS labeling capabilities. Whatever your need, we can help your product stand out!

Know what size you are looking for, but still undecided on the shape?

Looking for a Custom Design?

Take advantage of Silgan Plastics' award-winning Creative Design Services Team.

At Silgan Plastics, we provide a cost-effective, collaborative, design approach for innovative total packaging solutions. We offer speed to market with a full range of in-house value added services. With our extensive creative capabilities, we can drive concept development, from initial sketches to commercial bottles.

Great design begins with thorough research.

The consumer packaged goods market is constantly evolving, which is why you need anytime access to the latest consumer trends, product innovation, market sizing and strategic insight. We monitor trends from around the world to understand what is driving your customers next purchase decision. We incorporate what we learn into our design process in order to give your product differentiation in a competitive market place.

Our in-depth trend analysis is just the start of the design process.

There are a few key things that we take into consideration in the design of any package - environmental considerations, shelf appeal, performance & manufacturability of package. Material selection, weight reduction, and cube optimization are all factors that we consider as we look to provide a sustainable solution. When it comes to shelf appeal, we work to design concepts that will stand out amongst the competition. From color selection, to shape and labeling, many things help contribute to a products differentiation.

Not only does a package have to look great and appeal to customers, it has to perform. Ergonomics and user-friendliness along with functionality and stability are all considered in our initial design ideations.

One thing we won't do is design a package that is not manufacturable. We make sure that things like top load, assembly, filling and decorating are all taken into the overall design of a package. We want to make sure that once we have worked with you to develop the concept, the package can go into production with out any roadblocks.

Conceptualizing and sketching are key elements in the creative design process.

Our goal is to collaboratively create new customer inspired package designs so that you can rapidly move into the next stage of development. These sketches and concepts reflect current market and innovative next generation trends that can be reviewed and evaluated by your team.

From a dimensionally correct digital file, Silgan can create an FDM model using one of our in-house 3-D printers. This will give you a full size representation of your product that you can touch and feel.

Silgan Plastics' Creative Design Services personnel continually evaluate current in-market and cutting edge technologies. Take advantage of our highly trained professionals who are available to support your packaging projects with their technical expertise.

Our resources are focused on delivering rapid-to-market, cost effective, innovative packaging solutions.

We have **hundreds of samples** of our bottles available for you, created in many materials, shapes and designs. You can choose from over 700 standard and specialty items. We will supply up to 24 samples per bottle type. Just let your Silgan Plastics representative know what you'd like.

BOTTLE VARIETY

Resin PET, PP, HDPE, LDPE, PS, PCR

Size 23cc to 2.25 gal
